01 WHAT IS CLIMATE CHANGE?	1
<i>In this chapter, you will acquaint yourself with climate change basics</i>	
02 THE SCIENCE OF CLIMATE CHANGE	5
<i>From the latest stats on emissions to the latest knowledge on tipping points: scientists lay bare how climate change occurs</i>	
03 CURRENT EMISSIONS	21
<i>All about who emits how much, and which sectors are the worst of the lot</i>	
04 WHO IS RESPONSIBLE?	27
<i>Initiate yourself into the push and pull of climate warming in a world that is rich and poor.</i>	
05 IMPACTS: INDIA/SOUTH ASIA	39
<i>The latest know-how on what climate change is, or could be, triggering in this region of the developing world. A chapter close to our existence</i>	
06 NEGOTIATIONS: THEN AND NOW	55
<i>Update on what's happening (or not) in the wrangling between nations as they approach the crucial conference in Copenhagen in December, 2009</i>	
07 MARKET MECHANISMS	77
<i>An analysis of the ways in which developed countries are seeking to meet, and wanting to meet, their emission reduction commitments in the easiest way possible</i>	
08 LOW CARBON ECONOMY	91
<i>An expose of how imagining a low carbon economy for the future places the burden squarely on developing countries. This chapter summarises and explains currently circulating models, using information not available in the public domain.</i>	
09 BURDEN SHARING	107
<i>While presenting various ways in which the question of capping carbon dioxide emissions, dealing with its effects, and coming up with solutions have been dealt with, this section urges: first, whose burden is it? Second, what are the terms of sharing the burden of climate warming?</i>
