

CONTENTS

Foreword.....	10
Scope and applicability.....	12
1. Introduction.....	13
Benefits of CEMS	14
General concepts of CEMS	15
2. Sampling techniques.....	17
Extractive type systems	18
Source-level (non-dilution) extractive systems	18
Dilution extractive systems	20
Non-extractive (in-situ) systems	20
Point in-situ	20
Cross-stack monitors.....	20
Predictive emission monitoring and parameter surrogate Non-extractive	20
3. Methods for particulate monitoring.....	23
Transmissometry.....	24
Light scattering	29
Extractive light scatter PM-CEMS for flue gas below dew point (wet stack)	32
Optical scintillation.....	32
Probe electrification instruments.....	34
Triboelectric systems	35
AC Triboelectric systems	36
Extractive beta attenuation for flue gas below dew point (wet stack)	37
4. Gaseous continuous emission monitors	39
Optical methods for the analysis of gases	40
Simple non-dispersive infrared (NDIR)	40
Luft detector (NDIR).....	41
Photoacoustic detector.....	41
Gas filter correlation (NDIR).....	42
Differential optical absorption spectroscopy.....	44
Fourier transform infrared spectroscopy	45
Non-dispersive ultraviolet.....	46
Ultraviolet fluorescence.....	47
Chemiluminescence analyzers	47
Tunable diode lasers absorption spectroscopy	48
Non-optical instrumental techniques for the analysis of gases	49
Electrochemical cells.....	49
Conductivity (conductometric) analyser	49
Flame ionisation detector	50
Photo ionisation detector.....	51

Gas chromatography	52
Mass spectrometry	52
Ion-mobility spectrometry	52
Potentiometric analysis (Automated wet analysis by ion-specific electrodes)	53
Zirconia analyzer	53
Paramagnetic analyzers	54
Pollutants measuring technologies	56
5. Monitoring other gaseous parameters	59
Gas flow rate	60
Ultrasonic flow monitors	60
Pitot tubes	61
Averaging differential pressure probe	61
Thermal flow monitors	62
Infrared cross correlation	63
Vortex shedding flow meters	63
Water vapour content	63
Non-dispersive IR photometry with extractive sampling	64
Dispersive photometry in-situ	64
Automatic Psychrometry	64
Temperature and pressure	64
6. Regulatory requirements	65
Regulatory requirements for CEMS in India	66
Regulatory requirements for CEMS in US	67
Regulatory requirements for CEMS in Europe	69
Emission limit values (ELV)	70
Role of parties in monitoring regime	73
7. Selection	75
8. Installation requirement	81
Choosing a sample location	82
Other provisions for sample location	85
For systems with particulate and gas analyzers	85
Other provisions for systems with gas analyzers	85
Sample ports	85
Standard reference method	88
Special conditions in India	89
9. Quality assurance and control	91
EU and US approaches to quality assurance of CEMS	92
EN-14181: The European approach	94
US approach to quality assurance on CEMS	97
10. Calibration requirements for PM and gaseous CEMS	101
Calibration procedure in EU	102
EN-14181 details of calibration procedure in EU	102

Contents

Calibration requirements in India.....	122
Criteria for acceptance of CEMS field performance	123
11. Data acquisition and handling system.....	125
Principles of operation of the DAHS	127
General	127
Data acquisition	128
Functional test	130
Raw data storage	131
Calculation of first-level data	131
Storage of FLD.....	131
Storage of STA.....	131
Storage of standardized STA	131
Time stamping.....	131
Warnings, alarms and violations	132
Event log.....	132
Configuration	132
Reports	133
General	133
Reports on request	133
Configuration report	133
Data security	134
Availability of the DAHS	134
Tamper-proof data transfer	134
Preventing loss of data.....	134
Data back-up	134
Configuration back-up	135
Re-installation of program	135
DAHS verification and sealing	135
Time management.....	136
Data acquisition and handling system in India.....	137
Bibliography.....	139
Appendix A: MCERTS Performance Standards and Test Procedures for Continuous Emission Monitoring Systems – For gaseous, particulate and flow-rate monitoring systems	140
Appendix B: European and International Standards used for Stack Emission Monitoring.....	141
