CENTRE FOR SCIENCE AND ENVIRONMENT is a public interest research and advocacy organisation, which promotes environmentally-sound and equitable development strategies. The Centre's work over the past 38 years has led it to believe and argue, both nationally and internationally, that participation, equity and community-based natural resource management systems alone will lead the world towards durable peace and development.

DOWN TO EARTH is a science and environment fortnightly published by the Society for Environmental Communications. Founded in May 1992, the magazine has become a reading habit in nearly all districts of the country. In the words of *Down To Earth's* founder editor Anil Agarwal, the magazine reports all those things that a regular magazine or newspaper reports: finance, economics, politics, markets, diplomacy, conflicts, development. But we look at all this with two eyes, the eyes of science and of environment.

ACKNOWLEDGEMENTS: We thank all the reporters and researchers of *Down To Earth* and the Centre for Science and Environment, whose research have been used in this book.

We are grateful to Bread for the World and Oracle for their support for this publication.
